SUMMARY

AI and Data Science student specializing in Generative AI, machine learning, and data analytics. Experienced in building LLM-powered applications, REST APIs, and Power BI dashboards using real-world datasets. Strong background in NLP, data visualization, and AI system deployment.

EXPERIENCE

Data Science & Data Analytics Intern

Edify Techno Solutions **June 2025 - June 2025, Chennai, India**

- Built interactive Power BI dashboards analyzing a 9,995-record retail dataset across 4 regions and 3 product categories.
- Developed KPI metrics and drill-down visualizations used by HR and business teams for sales and profit performance tracking.
- Performed data cleaning, transformation, and modeling using Power Query and DAX, standardizing reporting calculations.
- Automated monthly reporting dashboards, reducing manual Excel consolidation effort and improving reporting efficiency.

PROJECT

IoT Patient Health Monitoring

- Built an IoT solution for real-time remote monitoring of bedridden patients' vital signs using sensors and microcontrollers.
- Engineered a 24/7 patient monitoring system that continuously tracked health parameters such as heart rate and temperature.
- Implemented alert mechanisms to notify caregivers of abnormal readings for timely medical attention.
- Contributed to a 40% improvement in emergency response times, enhancing patient care quality and safety.

AI Chatbot — LLM Web Application

- Built a context-aware AI chatbot using Google Gemini API with secure API key authentication.
- Developed a Flask REST API backend and JavaScript frontend supporting streaming responses.
- Implemented session management and Markdown rendering for interactive conversations.

JSON Prompt Generator

Mutual Support to Grow (MSG) • json-prompt-generator.onrender.com/

- Built a Generative AI backend using FastAPI and Google Gemini API with secure API key authentication to convert natural language into structured JSON prompts.
- Implemented async processing, retry logic, and fallback handling achieving 99% reliability across 100+ test runs.
- Developed React + Tailwind frontend integrated with REST APIs enabling sub-second prompt generation.
- Optimized API endpoints and resolved CORS issues reducing response latency by 20%.

EDUCATION

B.Tech , Artificial Intelligence & Data Science

Karunya Institute of Technology and Sciences • Tamil Nadu • 2027

CERTIFICATIONS

Git & GitHub

Geekster • 2025

Product Management Job Simulation

Forage - Electronic Arts • 2025

Data Analytics Job Simulation

Deloitte • 2025

Introduction to IoT

Cisco • 2024

Power BI Visualization

Infosys Springboard • 2023

SKILLS

Programming: Python, SQL, PostgreSQL, React, HTML, CSS, JavaScript

AI/ML: Machine Learning, LLMs, Generative AI

Data Analysis: Pandas, NumPy, EDA, Data Visualization

Tools: Power BI, Tableau, Git, GitHub, VS Code

IoT: Raspberry Pi, Arduino, Sensor Interfacing
