S. EARNEST KIRUBAKARAN OSWARLD

earni8105@gmail.com +918940134306 in/earnest-kirubakaran-oswarld-s earnest-s.tech

SUMMARY

AI and Data Science student specializing in Generative AI, machine learning, and data analytics. Experienced in building LLM-powered applications, REST APIs, and Power BI dashboards using real-world datasets. Strong background in NLP, data visualization, and AI system deployment.

EDUCATION

B.Tech , Artificial Intelligence & Data Science

Karunya Institute of Technology and Sciences • Tamil Nadu • 2027

SKILLS

Programming: Python, SQL, PostgreSQL, React, HTML, CSS, JavaScript

AI/ML: Machine Learning, LLMs, Generative AI

Data Analysis: Pandas, NumPy, EDA, Data Visualization

Tools: Power BI, Tableau, Git, GitHub, VS Code

IoT: Raspberry Pi, Arduino, Sensor Interfacing

INTERNSHIPS

Data Science & Data Analytics Intern

Edify Techno Solutions **June 2025 - June 2025, Chennai, India**

- Built interactive Power BI dashboards analyzing a 9,995-record retail dataset across 4 regions and 3 product categories.
- Developed KPI metrics and drill-down visualizations used by HR and business teams for sales and profit performance tracking.
- Performed data cleaning, transformation, and modeling using Power Query and DAX, standardizing reporting calculations.
- Automated monthly reporting dashboards, reducing manual Excel consolidation effort and improving reporting efficiency.

PROJECTS

IoT Patient Health Monitoring

- Built an IoT solution for real-time remote monitoring of bedridden patients' vital signs using sensors and microcontrollers.
- Engineered a 24/7 patient monitoring system that continuously tracked health parameters such as heart rate and temperature.
- Implemented alert mechanisms to notify caregivers of abnormal readings for timely medical attention.
- Contributed to a 40% improvement in emergency response times, enhancing patient care quality and safety.

AIRA – Multi-Agent AI Decision System (Hackathon Project)

- Designed backend architecture for a multi-agent AI framework coordinating specialized agents across finance, risk, and compliance decision workflows.
- Engineered agent communication pipelines and domain-specific analysis modules generating consolidated, explainable recommendations from structured inputs.
- Built scalable REST APIs and data-processing services enabling real-time reasoning traceability and dashboard-ready outputs for decision visualization.

JSON Prompt Generator

Mutual Support to Grow (MSG) • json-prompt-generator.onrender.com/

- Built a Generative AI backend using FastAPI and Google Gemini API with secure API key authentication to convert natural language into structured JSON prompts.
- Implemented async processing, retry logic, and fallback handling achieving 99% reliability across 100+ test runs.
- Developed React + Tailwind frontend integrated with REST APIs enabling sub-second prompt generation.
- Optimized API endpoints and resolved CORS issues reducing response latency by 20%.
